Associate Member

SAWIE Ecosystems Private Limited

Based in Pakistan, established in 2022

Company description

SAWIE is a digital platform offering climate smart & Regenerative Agriculture (CSRA) farm advisory services to farmers, data insights to supply chains and agribusinesses.

Motivation to join BCI

"BCI is a recognized internationally supporting sustainable and better cotton. Climate change has had a severe effect on Pakistan's cotton production, losing two-thirds of its crop production in recent years. For sustainable and better quality crop production, SAWIE approach matches with BCI. We think that becoming partner with BCI could make a difference in increased adaptation to climate-smart agriculture, helping Pakistan to produce better cotton. SAWIE's expertise matches as a BCI partner to strengthen farmers' awareness and better cropping practices (seed selection, sowing, irrigation fertilizer application and harvesting) helping in transforming conventional farming into climate-smart (better and sustainable crop production with positive environmental impact). This will help in reducing smallholders' climate vulnerability and increase crop yield as well as crop quality to increase farmers income. SAWIE look forward to developing projects together with BCI for international and national funding."
